ABSTPACT

This report compiles 1974-75 enrollment data for 923 American 'two-year post-secondary institutions: Comprehended in this.. report are post-secondary two-year junior and community colleges;, -. multi-purpose technical and/or vocational schools and institutes; and university branch colleges, campuses, and centers. Total enrollment was2,819, 583, a rise of 11.9 percent from 1973-74. Part-time enrollment totalled 1,553,399, a rise of 17.7 percent. Pull-time enrollment totalled 1,266,184, a rise of 5.8 percent. Six tables break the data down by type of institution (public, church-affiliated, propietary, or independent), by geographical regions and states, by sex of students, and year in school. Data are also provided on the full-time and total teaching staffs of each of the 923 institutions. The six tables, which make up the bulk of this document, are discussed in a short introductory narrative in which trends are described, and projections are made. The report is intended to be of primary importance in post-secondary higher education planning. The slowing of the freshman flow in 1974-75 provides further evidence of the need for two-year institutions to. continue their activity in providing increased educational opportunity for nontraditional and other continuing education students in part-time programs. (Author/NHM) '

The American College Testing Program (ACT) is dedicated to the enrichment of education. It was founded as a public trust and operates as a nonprofit corporation governed by elected educational representatives from individual states or regions, and by a Board of Trustees.

A fundamental goal of ACT is to exercise educational leadership through guidance-oriented assessment and research services in order to (1) assist in the identification and solution of educational problems and (2) communicate to the general and professional publics knowledge and ideas about education.

The chief beneficiaries of ACT's services are students, secondary schools, institutions of postsecondary education, and educational researchers.

ACT, a nonprofit organization, is an Equal Opportunity Employer

COLLEGIATE ENROLLEES IN AMERICAN 2-YEAR INSTITUTIONS, 1974-75.

Statistics, Interpretations, and Trends

Garland G. Parker

In 923 2-year postsecondary institutions reporting for this study in 1974-75, there were 2.819,583 students. This is the third annual report on enrollments in 2-year colleges issued under the joint sponsorship of The American College Testing Program and the University of Cincinnati. It is a companion study to the 55th annual report on enrollments in 4-year colleges and related institutions, published as ACT Special Report Thirteen.' In prior years, these studies were published in *Intellect* (formerly School & Society). Comprehended in this report are postsecondary 2-year junior and community colleges, multipurpose, technical and/or vocational schools and institutes, and university branch colleges/campuses/centers that have recognition, approval, or accreditation by regional associations, professional organizations, or state agencies.

Study purposes and data analysis guidelines. The aims of the study are to collect, interpret, and report on 2-year college enrollments as soon in the academic year as possible, to give a preview of them in early press releases, to provide information that will be helpful in postsecondary/higher education planning, and to place a particular focus on career education enrollments.

In terms of increasing support for this study series, it is gratifying to note that 745 institutional systems and 923 separate schools reported for 1974-75 in comparison to \$36 systems and some 700 schools in 1972-73, the first year of the report series.

^{&#}x27;Garland G Parker Collegiate Enrollments in the U.S. 1974-75 Statistics, Interpretation, and Trends in 4 Year and Related Institutions, ACT Special Report Thirteen (Iowa City, Iowa The American College Testing Program, 1975) This report and the others in the series published by ACT may be secured for \$2.00 cash from ACT Publications, P.O. Box 168, Iowa City, Iowa 52240

It should be noted that although actual enrollment figures are indicated, except where otherwise noted, because of the obvious interest in them, the percentage changes cited are based on comparably reporting institutions. This practice reflects the fact that some schools each year report too late for inclusion, incompletely, or not at all, thus, percentage changes are meaningful, as a rule, only when they are based upon institutions reporting comparably for 1974-75 and 1973-74.

Part-time student count still the feature story—up by 17.7%. Part-time students, totalling 1,553,399, showed a massive movement upward, with a rise in comparable situations of 17,7%, and provided the feature story on the spread of overall enrollments for 1974-75. When bracketed with a 20.6% rise in 1973-74, the increased enrollment of part-time students in the 2-year colleges was truly significant. As noted in the earlier study, 4-year and related schools with a part-time gain of 8% also reflected increasing concern and service for part-time students, but the phenomenal gain of 17.7% and the accounting for 55% of their entire enrollment in the category of part-time students indicated the strength of the thrust in the part-time education field that still is being mounted in the 2-year colleges.

Much emphasis was given in the study above cited to the tendency in recent years for traditional enrollments to waver, level off, or even decline, to the probability of their considerable decrease in the 1980s, to the rising needs for nontraditional and continuing education services, and to the importance of enrollments in these fields to the viability of postsecondary institutions in general. In their normally more ponderous reaction time, the 4-year and related schools appear to have gotten the vision of the future in respect to institutional as well as societal needs, but the 2-year colleges, to date, have been much more perceptive, flexible, and responsive in their movements to accommodate part-time students. The senior institutions well may profit by a careful study of the policies and strategies of their 2-year counterparts in this important area of postsecondary education.

Full-time students also show significant increase—rise of 5.8%. Paralleling but significantly outpacing the 4-year schools, the 2-year units, with a total of 1,266,184 full-time students reported in 923 institutions, showed a rise of 5.8% as compared with 2% in the senior schools. Although comprising only 45% of the total 2-year college enrollment reported, the full-time students still accounted for some 87% of the full-time-equivalent student number in the 2-year schools and, therefore, have to be considered the core element in the consideration of programs, finances, and faculty as well as physical resources. Part-time students will experience further growth in their importance, but in the years just ahead the full-time attendees will continue to command a central position in the 2-year college picture.

Parker Collegiate Enrollments in the U.S., 1974-75, 7-8

The grand total count reveals striking growth of 11.9%. In headcount, the 923 reporting-units showed a grand total of 2,819,583, for a truly significant increase of 11 9% This is in comparison to a rise of 11 6% in 1973-74 and a parallel growth of only 3 7% in the 4-year schools for 1974-75. On any basis of judgment, enrollment movements indicate that the 2-year colleges continue to comprise an academic lodestone which is attracting an increasing number of both older and younger Americans who are entering or reentering the academic mainstream at the collegiate level. Although there is no way of quantifying accurately their relative impact, there are many factors that contribute to the development of this educational phenomenon, Generally open admissions, lower fees than normally prevail in the 4-year schools, flexibility in educational programming, emphasis on career education without sacrificing interest in and support of transfer-oriented programs, stress on good teaching as well as close student-teacher relationships, and the location of most 2-year schools in commuting range of their students all are powerful influences for the attraction of students.

Public 2-year schools continue high rise—up 12.2%. As a reflection of the interaction of various social, political, and economic forces in the educational world, it is of interest and importance to get perspective on the enrollment movements on a comparative basis as they involve public, church-affiliated, and independent 2-year schools. In the 717 reporting 2-year public schools (included in 545 institutional systems), there were 2,682,098 students reported, for a rise of 12.2%. Significant as this gain is, however, it is short of the 12.4% increase recorded for schools reporting comparably in 1973-74. Full-time students in this category numbered 1,174,405, for a jump of 6.2%, and the part-time figure of 1,507,693 was up by 17.6%. The fact that total enrollment in the public institutions comprised 95% of the grand total in all reporting 2-year schools gives some sense of the overwhelming role of the public units in the 2-year college field.

Independents gain 10.6% and church-affiliated colleges rise 2.4%. Two-year colleges in both independent and church-affiliated categories showed gains for 1974-75, in contrast to the loss patterns displayed by each group in 1973-74. In 111 reporting independent schools, with a total enrollment of 92,119, the rise was a significant 10.6% in comparable situations. In full-time students, the count was 55,591, a gain of 4%, the part-time total of 36,528 reflected an unprecedented growth of 21.8%—even higher than the 17.6% mark achieved in the public schools. In 1973-74, the same group registered a loss of 1.4%.

The 95 reporting units that are church-affiliated and/or church or religiously related counted a grand total of 45,366 students for an increase of 2.4%, as against a decline of 2.7% in 1973-74. These schools reported 36,188 full-time

students, a slight loss of 3%, and a part-time count of 9,178 for an unusual gain of 16.8%. In similar tabulations for 1973-74, the full-time enrollment decline was 5.8%, and the part-time gain was 18.8%.

Although the numbers are small by comparison with those of their public counterparts, the figures indicate that these private schools shared advantageously in the upward movement that characterized postsecondary enrollments generally in 1974-75. The high rises in part-time enrollments clearly indicate the alertness of these units in the part-time education area and their flexibility in adjusting to the academic needs of the students attending on less than a full-time-basis.

When enrollments for the independent and church-affiliated units are combined, the results show that the 206 reporting nonpublic schools enrolled a grand total of 137,485 students, for an annual gain of 7.6%, the full-time count of 91,779 showed a rise of 2.2%, and the part-timers numbered 45,706, an increase of 20.8%. Of the total students reported in all 923 schools, 4.9% of them were in the nonpublic units.

Schools and students by systems—state and local. A special statistical focus in this and the companion report on the 4-year schools is on the rapid and massive growth of the unitary, state, district, county, local, and city systems of multicampus schools. In the 1973-74 antecedent of this report, considerable attention was given to the growth, rationale, advantages, and problems attendant to the development of the systems approach in the organization of 2-year postsecondary education. A recounting of that analysis would be redundant, but the author refers interested readers to the statements there for background information. The listing of the public systems of schools is reflected in the subgrouping of the unit enrollments set forth in Table 1.

For 1974-75, a gleaning of data from Table 1 shows that the numbers and types of systems, their total enrollments, and the percentage relationship to the enrollment in all reporting 2-year schools were as follows. 19 state systems, 447,350, 15 districts, 409,841, and 9 local and county groups, 88,053. In all 43 public systems, there were 427,102 full-time, 518,142 part-time, and 945,244 grand total students, 33.5% of all students reported. By system types, the percentages of the total enrollments in all the 923 reporting schools were as follows. state, 15.9%, district, 14.5%, and local and county, 3.1%.

The emphasis on career education programs and enrollments. An aim from the outset in this study series has been to give special attention to career education in the 2-year institutions. In the last quarter of a century, a major thrust

Garland G. Parker. Enrollments in American Two-Year Colleges, 1973-74 Statistics, Interpretation, and Trends," *Intellect.* 102 2357 (April 1974), p. 462

in the 2-year postsecondary schools has been to prepare an increasing number of students for career areas where their collegiate-level training would provide qualifications for immediate job entry.

In a subsequent ACT Special Report, particular attention will be given to career enrollments by program, but emphasis in this study is placed upon enrollments by types of institutions. The extensive rationale displayed in the 1973-74 report remains valid and will not be reiterated 'Suffice it to say that the thrust toward career education continues upward in very sharp degree and promises to continue so in the years just ahead. Indeed, the recession-inflation or "stagflation" experience of the 1972-74 period gave more momentum to the drive toward career education. In the economic short run, at least, priority has been given in the job market to students with technical and vocational training programs to their credit. Supportive though this writer consistently has been of career education in the 2-year schools, an oft-repeated warning is worthy of repetition. Career education is commendable but not at the expense or to the exclusion of the broader and more general education that primarily is the result of an adequate exposure to the arts and sciences. As the technical or vocational specialists reach the point where junior management or other administrative assignments may be open, they will find that the wider perspective and deeper understanding deriving from the association/with the liberal arts and the so-called "academic" disciplines provide an invaluable background that is highly facilitative of successful management. Madagement decision making so often involves questions and implications that range far afield from the narrow speciality in which a technician may have been trained Furthermore, merely to keep pace with the rapid change of our times, the career education specialist needs not only to keep abreast of developments in one's own field but also to make an effort to sample and savor academic offerings in those studies that should enable one to experience life as well as professional enrichment, and to grow in the field of responsible citizenship Nevertheless, the data track the students in their pursuance of career education paths, and it is in order here to indicate the enrollment trails they leave behind them.

Certain subset calculations reflect in a general way the proclivity of 2-year collegians for the career programs. The subsets comprehend junior, community, technical, vocational, technical/vocational, and multi-purpose colleges as well as branch campuses and centers and any other school type that does not fit in the above categories.

An overview of technical/vocational enrollments. Of all the school types, the 76 reporting technical schools, with a total enrollment of 87,383, showed the highest percentage gain, 18.4%, over 1973-74. With 55,873 full-time students, the gain was 12 2% but the 31,510 part-timers executed a near quantum leap

Parker, "Enrollments in American Two-Year Colleges, 1973-74," p. 463.

upward of 30.2%. In the related group of 43 institutions classified as technical/vocational schools, there were 38,327 full-time students, a gain of 15.7%; 24.189 part-time registrants emerged for a striking gain of 22.6%; and the grand total was 62,516, an increase of 18.2% While the numbers are not large enough to be statistically definitive, seven strictly vocational schools with 2,544 full-time students, 830 part-time enrollees, and a grand total of 3,374 snowed a full-time gain of 2.5%, a part-time loss of 17.8%, and an overall decline of 6.4%. In all school categories readily identifiable by type, this was the only area in which there were decreases in part-time and grand total students. When consideration is given to the fact, however, that many hundreds of thousands of students enrolled in junior and community colleges actually were pursuang technical and vocational study programs and when note is taken of the fact that those schools experienced significant gains in their enrollments, it is clear that the thrust toward technical education continued its vigorous upward motion in 1974-75.

Junior and community college enrollments still on the rise. The 485 institutions classified and reporting as community colleges indicated a grand total count of 2,281,074 for a gain of 12.3%. Of those, 951,067 were full-time students, a rise of 6%, and 1,330,007 were enrolled on a part-time basis, for an increase of 17.5%. In the 242 units labeled as junior colleges, the grand total was 280,287 students, which reflected an overall gain of 7.2%. The lesser level of increase, as compared to the technical and community colleges, reflects the fact that many of the units in this group are private schools whose enrollments are more stabilized than those of the public colleges. In these schools, the full-time number was 167,905, a gain of 1.6%, and the part-time count was 112,382, reflecting a sharp rise of 19.2%.

Multi-purpose and branch colleges also experienced growth. In 13 institutions classified as multi-purpose, a total of 54,040 students showed an increase of 14.2% that was only exceeded by the technically oriented schools. The 19,013 full-time and 34,027 part-time students accounted for respective gains of 6.9% and 18.5%. Fifty-six university branch colleges, campuses, and centers showed only very modest enrollment gains. The 51,741 student total for such schools reporting represented an upward movement of only 3.4%, the 31,309 full-time students were up by 4.3%, but the 20,432 part-time enrollees increased only by 1.8%. Only one institution fell into a classification "other" than those above noted, and its enrollment comprehended only 168 students.

Comparisons of comparable public vs. private schools by institutional types. For purposes of comparison, a summary analysis of enrollments by institutional types in comparable situations is helpful. In the public arena, the numbers of schools by types, grand total enrollments, and percentage changes up or down were as follows: 60 junior, 120,084, 9.4%, 262 community, 1,523,984, 12.2%, 42 technical, 58,746, 19.8%, 19 technical/vocational, 35,110, 18.2%, 10 multi-purpose, 45,820, 14.3%, and 14 branches, 44,884, 3.4%. In the inde-

pendent category, there were 51 comparable junior colleges with 28,576 students for a gain of 3 6%. In the remaining independent school types the data were as follows 6 community, 28,174, 20.8%, 8 technical, 5,023, 4.3%, 3 technical/vocational, 1,425, 18 4%, 4 vocational, 1,140, -6.4%, 1 multi-purpose, 478, 7 4%; and 1 "other," 168, -4%. In the church-related schools, the figures are as follows 74 junior, 32,752, 2.3%, 1 community, 458, 7.5%, and 1 technical, 269, -7%. These computations reflect the emphasis placed on technical/vocational educational programs in the public schools as compared to the nonpublic and, conversely, the liberal acts stress in the private institutions.

Independent proprietary (tax-paying) schools show 4.7% gain. A category of schools that has been emerging in this study series in a statistical sense is the independent and proprietary tax-paying schools. Twelve such schools reported in 1973-74, but the number was 29 for 1974-75. Only 10 of them, however, reported enrollments on a comparable basis for both years. Since there is no nationally published study of enrollments on the many thousands of schools that fall in this classification, such data as have surfaced for the 29 schools and the 10 comparable units are worthy of attention. In the reporting schools, there were 15,014 total students, an increase in comparable situations of 4.7%. The full time total of 11,969 and the part-time portion of 3,045 reflected a full-time rise of 9 4% but a part-time loss of 11.3%, in comparable units. For the first time in this study, the reporting schools in this category are identified and their enrollments cited, in Table 6.

Perspective on full-time freshmen in comparable schools—modest movements up—only 2.8%. Freshman figures in general are less meaningful for 2-year than 4-year institutions because of the more variegated pattern in which they appear as a result of the enrollment of first-time degree-credit persons, returnees, transfers, the incidence of the input of adults often after many years out of high school, the presence of certificate and/or certification or licensing programs, numerous other programs with objectives short of earned degrees, and the highly variable mixture of part-time and full-time students. The purpose here is not to be completely comprehensive and inclusive of all so-called freshmen but to target on a significant control group of full-time classified freshmen in comparable-school situations. To the extent that this group provides the entry base for the core group of students around which the basic and ongoing curricular, facilities, faculty, and student services planning is done, it is of high importance.

In this perspective, it is significant that in 458 schools reporting comparably, the grand total of 429,844 full-time freshmen amounted to a modest growth of only 2 8% Within the overall matrix of schools, the 318 public units, with 394,548 freshmen, showed an increase of 3.5%, the 74 church-related units reported 16,750 such students and had a marginal gain of only .8%. The 66 independent institutions with 18,546 fresh nen enrollees actually declined by 8 1% By contrast, in 1973-74, the grand total of full-time freshmen in comparable situations rose by 3.2%, the public units grew by 3.9%, the church

schools by 6.4%, and the independent institutions by .6%. Two implications suggested by the data for the last 2 years are. (1) that the leveling off of the enrollment of traditional full-time freshman groups, so much a subject of concern and speculation for the mid and later 1970s, and especially the 1980s, already may be manifesting itself, and (2) that, in view of the grand total enrollment increase of 11 9% and 17.7% rise in part-time students in all comparably reporting 2-year schools, the vital relationship of part-time education in all of its manifestations (continuing, nontraditional, experiential, transfer, late entry, and the like) is increasingly evident. The sluggish movement and or lag in freshman enrollments must be a matter of ongoing concern for educational and societal planning just as innovative and creative practices should be priorities for the 2-year schools in the remaining 1970s and the 1980s.

A look at men and women in the enrollment picture—women gain 15.4%. In this decade so marked by the emergence of women under banners of liberation, equal rights, and affirmative action, it is significant and reassuring, though not surprising, to-see women take a front and center position, on a percentage basis, in the developing enrollment picture. Of the 2,819,583 student grand total in 929-reporting institutions, 46.4% were women, as compared to 41.5% in 1973-74. In the full-time and part-time categories, women registered respective percentage enrollment gains of 8.4% and 21%, as compared to 4% and 14.6% for men. The female portion of the full-time enrollment was 42.4%, and of the part-time count was 49.7%. In the public sector, the women gained 9.2% in full-time, 21.3% in part-time, and 16% in grand total comparable counts over 1973-74. The female enrollment portions of public enrollments were 41.5% for full-time, 49.8% for part-time, and 46.2% for grand total counts.

The church-affiliated units by comparison had .8%, 12.4%, and 3% increases, respectively, in the full-time, part-time, and total columns, with women comprising 52.3% of full-time, 58.1% of part-time, and 53.5% of their grand total enrollments. Similar tabulations for the independent schools reflect respective gains for women in full-time, part-time, and grand total numbers of 2.6%, 12.1%, and 10.6%, with female proportions of 53%, 37.3%, and 46.8% in the same areas of enrollments.

In all reporting schools, the female percentages of total enrollments by types of schools were as follows for full-time students, junior, 46 1%, community, 42 1%, technical, 38%, vocational, 36 1%, technical/vocational, 38.1%, multipurpose, 45.1%, branches, 42.9%, and other, 6.8%. In part-time enrollments, the percentages for women by school types were, junior, 48.3%, community, 50.4%, technical, 34.3%, vocational, 39 8%, technical/vocational, 35.2%, multi-purpose, 50.4%, branches, 46.8%, and other, 18.2%. While the march

of the women moves on, as evidenced by the overall 15.4% gain, in comparison to a 9 1% rise for the men in grand total numbers, it needs also to be observed that with women accounting for 46 2% of the total 2-year collegiate enrollment in 1974-75, there is less than a 5% marginal gain to be expected before the 50-50 level is reached. Unless men should cease collegiate attendance in some unexpected degree, there are not the massive gains in female enrollments ahead that many might have expected in the future.

The geographic range of full-time enrollments. Geography provides yet another vantage point for viewing enrollment developments. In Table 5, excollments for comparable institutions on a full-time basis by geographic regions and states are set forth Summary data indicate enrollment totals and percentage changes by regions as follows. New England, 30,571 (.7%), Middle Atlantic, 195,050 (5.6%), East North Central, 131,950 (5.9%), West North Central, 68,671 (-2.2%), South Atlantic, 142,146 (7.4%), East South Central, 33,898 (7.9%), West South Central, 65,835 (7.1%), Mountain, 38,473 (18.4%), Pacific, 180,133 (6%), and Territorial, 428 (-11.2%). With an 18.4% rise, the Mountain region was the increase leader by far, and the West North Central showed the greatest continental loss with a 2.2% decline

Full-time equivalent enrollments—focus on the FTE. Although human heads provide the all-important basis for personalized student accounting, it is, the ubiquitous FTE or full-time-equivalent student that more and more provides the base of public subsidy and other financial support. FTE conversions, reflective of the lesser credit-hour value of part-time headcounts, tend to reduce the percentage changes to less dramatic levels. In the 923 reporting schools, the FTE count was 1,783,983, and the increase, in comparable situations, was 8 9% In the public units there were 1,676,969 FTE's, a rise of 9.2%, the church schools showed 39,247 for a gain of 7%, and the independent units had 67,767, a 6 9% increase By school types, the FTE percentage changes in comparable schools were as follows. junior, 4%, community, 9.3%, technical, 14 9%, vocational, -1 7%, technical/vocational, 16 8%, multi-purpose, 11.1%, branches, 3.9%, and other, -5 6%.

Prospects and problems for the 2-year colleges ahead. In reports for prior years and in ACT Special Report Thirteen published in 1975, the author commented extensively upon the anticipated decline in high school graduates after 1976-77 and the possible implication for all institutions of higher education. As the data set forth in this report indicate, the 2-year schools have been active in providing increased educational opportunity for the nontraditional and other continuing education students in part-time programs. The slowing of the freshman flow in 1974-75 into the 2-year schools provided further evidence of the need in a survival sense for those institutions to continue their activity in seeking student constituencies to serve in addition to the historic corps of high school graduates.

Leaders of 2-year colleges should beware of complacency. Their units are not aimmune to the forces of finance, the impact of continued recession, the wavering of public support for higher education, and the collective bargaining thrust of faculties that are among the many aspects of concern to the 4-year schools. On their part as well as that of their 4-year counterparts, there will be an ongoing need for creative planning for programs that will be suitable for the remaining 1970s and that might serve students better in the 1980s. They should beware of physical overextension and should be concerned with good teaching, good student advising, and service to the publics they serve. Competition for students among institutions in the years ahead will be unprecedented in the history of American higher education.

Teacher information for 2-year schools. The counts of full-time and total teaching staffs for 2-year schools that reported them for this study are listed in Tables 1-3. The thesis that teachers are elemental in the learning process of students is little questioned, and the assumption in this study is that the presentation of teacher data along with student statistics has high relevance for the assessment of the academic enterprise. Contrary to the experience in surveying the 4-year and related institutions, the author commends the 2-year schools generally for the faithfulness with which they report their faculty figures. Eyen so, there are a few instances in which such data either were not reported or were not available. As a rule, the absence of teacher tabulations is associated with the very large and/or the great systems. Given the significance of these great systems, in the overall scheme of postsecondary education, failure to report teacher information is regrettable. There appears to be some correlation between bigness of both 4-year and 2-year schools and the capacity or willingness to report teacher information. At any rate, the writer is grateful to the overwhelming number of 2-year institutions that did share their teacher data. In the interest of focusing upon the teacher-learner process. directly, the teacher definitions used in this study depict a full-time teacher as one who spends half time or more in teaching. Others who teach are in-🛫 cluded in the grand total, and persons with faculty appointments who serve full time as administrators or researchers and do no teaching should not be

Future plans and later incomplete reports. Despite the fact that this study comprehends reports from 923 institutions, still it is true that some institutions did not return questionnaires. It is hoped that a larger number will respond year by year. Others reported too late for inclusion or provided data in formats that were unusable. In the effort to produce as early in the year as possible for press and later publication purposes a comprehensive and interpretive study of 2-year colleges and their enrollments that cannot be produced through other channels, we solicit and will appreciate the continued support of as many 2-year schools as possible. As the report will be refined and, it is hoped, improved in later years, comments and suggestions, critical as well as commendatory, by readers are welcomed.

reported for the purposes of this study.

ACKNOWLEDGMENTS

This is the third study in the series on enrollments in 2-year postsecondary institutions that has appeared under the sponsorship of ACT and the University of Cincinnati. Without ACT support of the research, the reports for 1972-73 and 1973-74 and this present report could not have been issued. The author is appreciative of the ACT sponsorship and especially is grateful to Oluf Dávidsen, president, C. Theodore Molen, vice president, Publications and Public Affairs, and Fred F. Harcleroad, former president, of ACT for the original impetus and the ongoing understanding, support, and wise counsel that have made the study series possible.

Significant support at the University of Cincinnati also is fundamental to the massive exercise involved in a national enrollment study. Especial commendation is in order for Lynn M. Barber, associate vice provost and director of student records, for his able administrative and technical service. Appreciation is expressed to Donna Ferneding and Judy Yanca, secretaries, and to Margaret Stillwell and Barbara Yohman, research assistants, for their important contributions. Particular gratitude is extended to Warren Bennis, president, and Gene D. Lewis, vice president and provost, for their strong support and keen interest in this study. Finally, the author is indebted most of all to the registrars and other reporting officers who provided the indispensable data for the report.

OFFICIAL DEFINITIONS USED IN THIS ACT SPECIAL REPORT

Institutions surveyed are postsecondary 2-year junior and community colleges, other multi-purpose colleges, technical schools or institutes, vocational schools, technical/vocational schools, and 2-year units administered by 4-year colleges or universities (branch colleges/campuses/centers) that have regional association, professional organization, and/or state agency recognition, approval or accreditation, and offer collegiate-level certificate and associate degree programs. Classification of schools by types reflects institutional preference where available and the author's judgment.

The full-time student devotes substantially all working or study time to the college curriculum. This is interpreted generally to mean 12 collegiate-level credit hours, presumably 75% of a normal load or more. The presumption is that these students are assessed full-time fees. The part-time student normally takes collegiate-level credit courses in the late afternoon, on Saturday, in the evening, frequently in the day, or by extension, and enrolls for fewer than 12 credits, or less than 75% of a normal load.

Freshmen are presumed to be full-time persons classified as first-year or freshman collegiate-level undergraduate students. They are not necessarily first-time, degree-credit students, because such a restriction would preclude the listing of any students registered as freshmen who began their college work in the previous winter, spring, or summer.

Two-year college students are those enrolled in collegiate-level oredit-hour courses in 2-year certificate or associate degree programs in institutions covered in this survey. It is presumed that all eligible and enrolled 2-year collegiate-level credit hour students are counted.

Full-time-equivalent-enrollments are not cited by institutions, but FTE's are computed by categories of schools. The adjusted headcount method is used, whereby full-time-equivalent enrollment equals the headcount of full-time students plus one-third that of part-time students.

The full-time teaching staff is composed only of those persons holding rank of instructor or equivalent, and those of higher rank, in full-time employment for the academic year who give at least half their time to instruction and are not on leave of absence. The total teaching staff includes both full-time teaching staff and part-time individuals not on leave, including lecturers, fellows, teaching assistants, research assistants (if they teach), and others who teach.
